高速电主轴

洛阳轴研科技股份有限公司

LUOYANG BEARING SCIENCE & TECHNOLOGY CO.,LTD.

洛阳轴研科技股份有限公司积五十年开发、生产电主轴之经验，并吸收国外先进设计、制造技术，开发了“主轴结构分析计算CAD”软件，形成一套完整的电主轴设计、制造科学体系。采用GB/T19001-2008、GJB9001B-2009和ISO9001质量管理体系标准，并通过其质量认证。

洛阳轴研科技股份有限公司还是世界上为数极少的同时生产高速电主轴和高速精密主轴轴承的生产商之一，系列生产P2 (ABEC9) 、P4 (ABEC7) 高速精密角接触球轴承。

Based on the 50 years' spindle production experience, and absorbing foreign advanced design and manufacturing technology, we have developed the "CAD for spindle structural analysis and calculation", forming a complete and scientific system for spindle design and manufacture. The GB/T 19001-2008, GJB9001B-2009 and ISO9001 quality management systems have been obtained by us.

We are one of the fewest manufacturers in the world, producing high-frequency spindle and high-speed precision spindle bearings as well, and manufacturing high-speed precision angular contact ball bearings in P2 and P4 series.

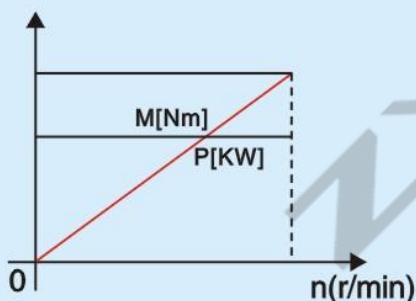

产品简介

机床主轴是机床的重要部件，传统机床主轴是通过传动装置带动主轴旋转而工作的。电主轴是电机内装式主轴单元的简称。其主要特点是将电机置于主轴内部，通过驱动电源直接驱动主轴进行工作，实现了电机、主轴的一体化功能。

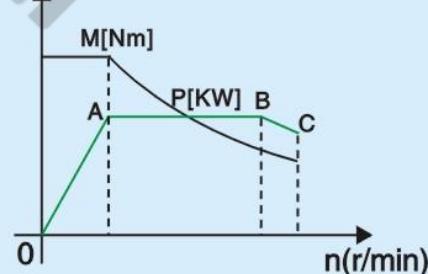

特点：

- 结构紧凑，机械效率高，噪声低，振动小，精度高。
- 运行平稳，没有冲击，使主轴轴承寿命得到延长。
- 易于实现高速化，动态精度和静态精度高，稳定性更好。
- 可在额定转速范围内实现无级变速，以适应各种工况和负载变化的要求。
- 利用驱动控制技术，可以实现准停、准位、准速功能，适应车削中心，加工中心及其它数控机床的需要。

基于上述特点，电主轴对于提高生产率与加工质量，促进相关行业的发展具有重大意义，其用途十分广泛。迄今为止，洛阳轴研科技股份有限公司已开发生产8大类，20个系列，200多种电主轴产品。额定转速从1500r/min到150000r/min；支撑形式有高速精

恒转矩主轴
Spindle with constant torque

恒功率主轴
Spindle with constant power

Brief introduction

The machine spindles are the important parts of the machine tools, which traditionally driven by the gearing. The electric spindles are the shortened name of embedded motor spindles, the main property of which is to put the motor inside the spindle, and to run by driving power. Thus to fulfill the motor and spindle compounding.

Characteristics:

- Tight structure, high mechanical efficiency, low noise, low vibration, high precision.
- Stable running, weak impaction, prolong bearing life of the spindles.
- High speed, high dynamic and static precision, high stability.
- The stepless variable speed in the range of the rated running speed is available to suit the request of various conditions and loads.
- Driving control skill makes accurate stop, accurate position and accurate speed suitable for the request of processing center and other numerical control machine tools.

Upon the above characteristics, the electric spindles play the important role in improving the production efficiency and promoting the related industry development. Up to now, Luoyang Bearing Science and Technology Co.,Ltd. has developed 8 groups' 20 series, 200 varieties of electric spindles with rated speed from 5,000 r/min to 150,000 r/min, high-speed precision rolling bearing and air static pressure bearing used as its support, the grease, oilmist, oil gas etc. for its lubrication, two kinds of output of constant torque & constant power.

各类主轴简介

- 磨削用电主轴有MD、MDF、MDT、MDS、MDK多个系列，润滑方式有油脂、油雾、油气多种方式，广泛应用于内圆磨削、外圆磨削、拉刀磨削、螺纹磨削等。
- 铣削用电主轴包括XD、XDS、XDJ三大系列，与数控铣、雕铣机及并联机床相配套，进行高速铣削和雕刻加工，适用于常规零件、工模具、木工件加工。其中XDS系列带有自动松拉刀机构。XDJ系列加工中心用电主轴装有码盘，能对转速进行精确控制和实现准停，且具有自动更换刀具功能。
- 钻削用电主轴包括ZD、ZDS两大系列，主要用于印刷电路板（PCB）、油泵油嘴等行业的小孔钻削、钻铣削加工，以满足小孔和微孔的加工需要。ZDS系列具有自动松拉刀机构，可以实现快速、自动换刀。
- ED系列高速离心机用电主轴广泛用于分离、粉碎、雾化、试验等高速离心领域。
- CD、CDJ系列高速车削用电主轴能获得好的加工精度和表面粗糙度，特别适应于铝、铜类有色金属零件的加工。
- 国内首创的LD系列高速旋振用电主轴用于加工空调设备热交换器用内螺纹铜管。
- XP、XPJ、CPJ系列机械主轴，可用于加工中心，数控铣床，数控车床等设备，与动力联接方式有皮带传动式和直联式，具有高转速，高精度，单元化的特点。
- 其它用途电主轴包括切割机用、试验机用、驱动用主轴等，是根据用户特殊需要，而专门设计的主轴。

□ 电主轴配套电源的选择：

电主轴采用变频器作为驱动电源，主轴的参数不同，对变频器的要求也不同。选择变频器要与电主轴的参数相匹配，其中变频器额定电流至少为电主轴的1.3倍，最好在1.5倍以上。

□ 电主轴的润滑与冷却：

主轴常用的润滑方式有三种：油脂、油雾和油气。油脂润滑结构简单，但达不到很高的转速；油雾润滑效果较好，目前应用也最为广泛，它可以适应较高的转速，但它对环境有一定的影响；油气润滑效果最好，可适应更高的转速，对环境无污染，但油气润滑装置价格较高。油雾、油气润滑采用的油品一般为32号汽轮机油。

主轴开始运转之前应开启油雾或油气润滑系统，主轴停机后再关闭润滑系统。水冷却是主轴冷却的常用方式，要求冷却水有一定的防锈功能，必要时要求对冷却水进行适当过滤，在主轴运转之前应开启冷却系统对主轴开始冷却。

Brief introduction of the various spindles

- Electric spindles for grinding include MD, MDF, MDT, MDS, MDK series etc. The lubrication ways may be oil mist, oil gas etc. The grinding spindles are widely used in bore grinding, external grinding, hauling grinding, screw thread grinding etc.
- Electric spindles for milling include XD, XDS, XDJ three series, which can carry through the high-speed milling and carving processing matched with numerical control milling machine, carving & milling machine and parallel connection machine, and are suitable for the normal parts, industrial mould and wooden parts processing. The XDS serial is installed with the automatic power draw bar. With code panel for the XDJ serial electric spindle of the machining center, the rotation speed and accurate stopping can be controlled precisely and the cutter automatic changing are available.
- Electric spindles for drilling include ZD and ZDS two series. They are mainly used to small holes drilling, micro-holes drilling in PCB and pumps & nozzles. With the automatic power draw bar, the cutter fast and automatic changing is available.
- ED series electric spindles for high-speed centrifugal devices are widely used in separation, smashing, fogging and testing etc. high speed centrifugal industry.
- CD, CDJ series electric spindles for high speed lathe work make it possible to get the fine processing accuracy and roughness, and are especially suitable for the aluminum, copper colored metal parts processing.
- LD series electric spindles for high-speed rotation rolling are used to process the inner screw thread copper pipes of the air conditioner heat exchangers.
- XP, XPJ, CPJ series mechanical spindles can be used for the processing centers, numerical control milling machines and lathes etc. Connecting the power by the strap transmission and direct-mounted ways, they have the specialty in high rotation speed and high precision.
- The other kinds of electric spindles include ones for cutting machines, testing equipments and driving, which are available on the request of customers.

Choice of the mating main power:

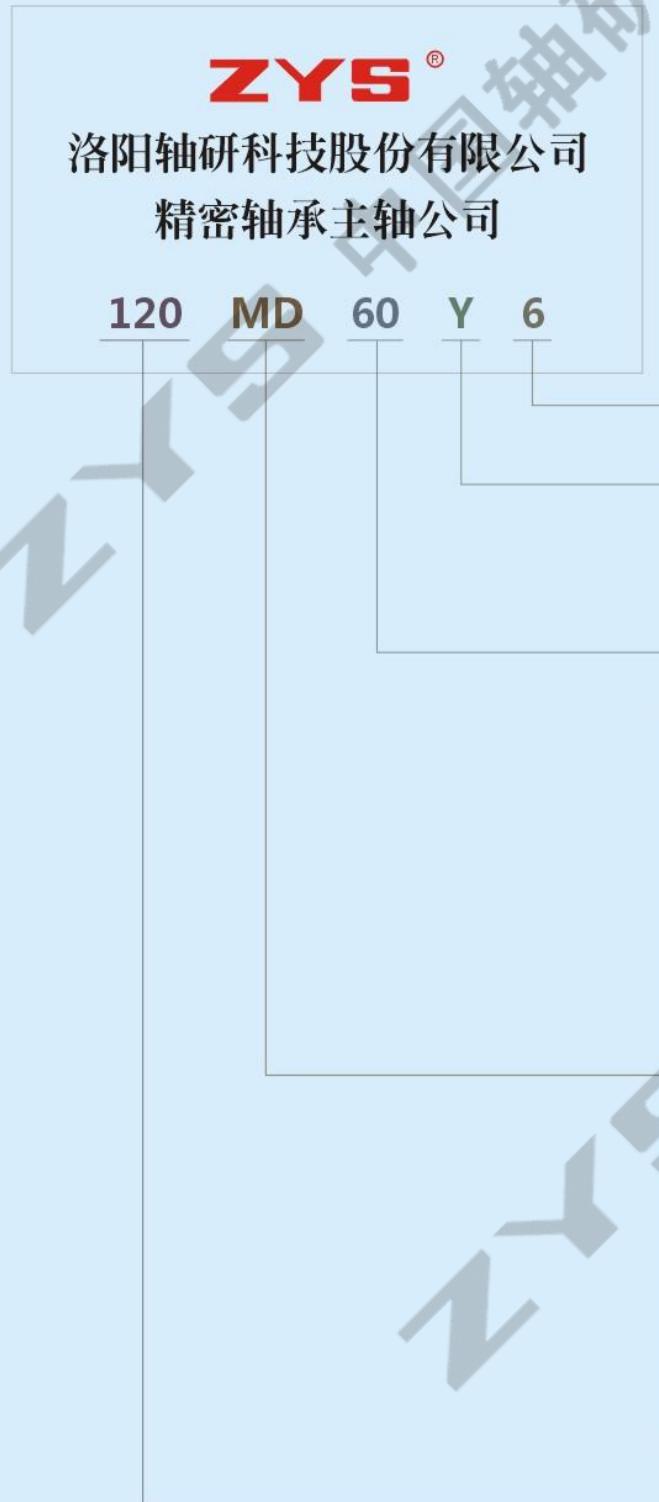

The converter is chosen as the electrical driving source for the electrical spindle. One spindle with different parameters will have different requirements on the converter. The converter chosen should match the parameters of the spindle. Among others, the rated current the converter should be 1.3-fold that of the spindle at the lowest, preferably 1.5-fold or higher.

The lubrication and cooling:

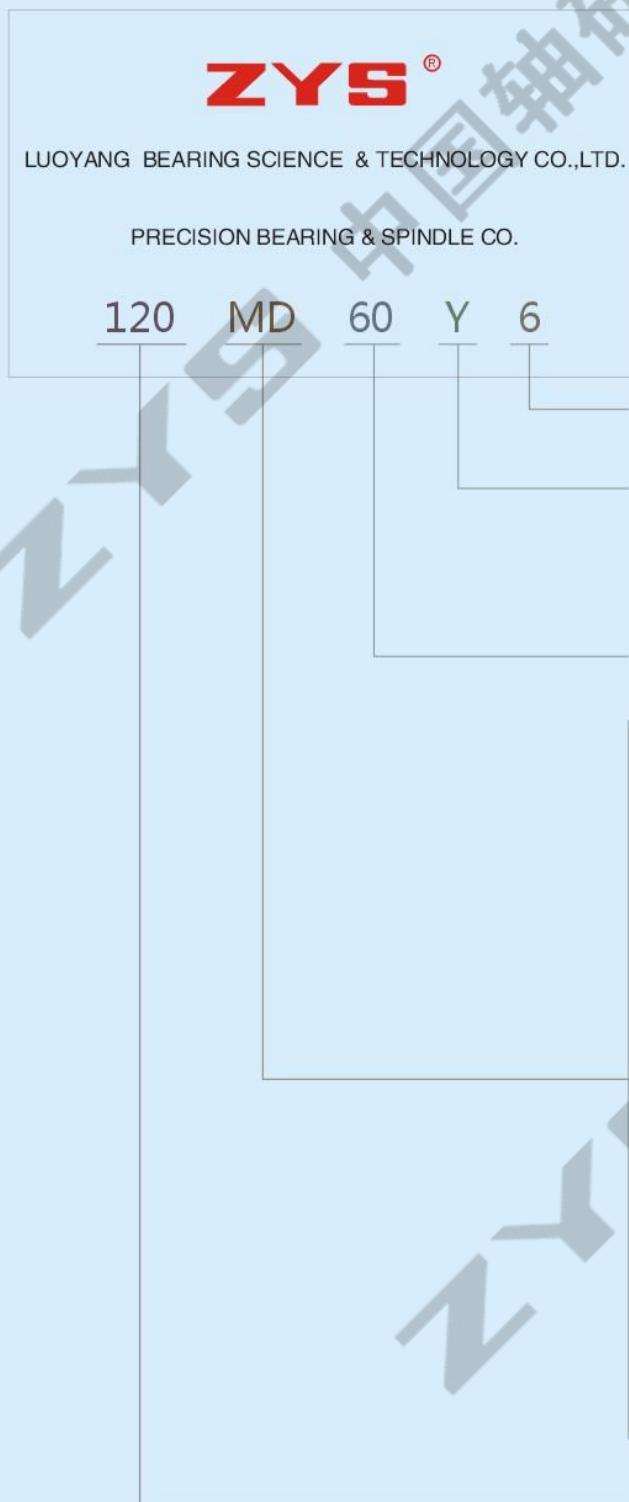

There are three kinds of lubrication method:grease; oil mist and oil gas. The grease lubrication is simple but cannot reach the high rotation speed. The oil mist lubrication is in good effect and is widely used but affects to the environment. The oil gas is the best one but the price is high. The oil mist and oil gas lubrication normally use 32# steamship engine petrol.

Turning on the oil mist or oil gas lubrication system before the spindles turning and running off it after the spindles stopping. The water-cooling is the normal way to cool the spindles. The cooling water should be in antirust feature and filtered when necessary. The spindles cooling system should be turn on before running the spindles.

硅片多线切割机主轴 Belt driven spindles for multi wire saw

硅片多线切割机主轴（线切机轴承箱）用于硅片切割机设备，主轴组由定支撑轴、动支承轴和导轮组成，中间通过拉杆联结（如图示）。目前已经为国内太阳能电池板硅片加工企业提供进口替代主轴，并为国内线切机床设备制造企业批量供应主轴。

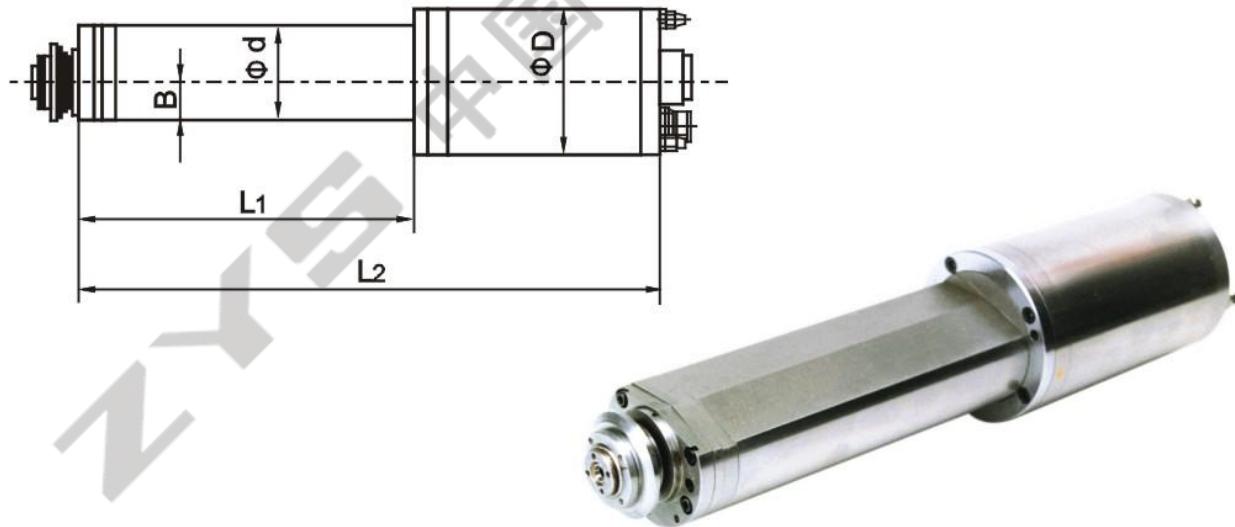

The spindle for silicon slice multi wire saw machine (the bearing box of wire saw machine) is used to silicon slice saw machine. The spindle group is composed of fixed support shaft, movable support shaft and guide roller, which are connected through draw bars. Recently, we have supplied the domestic solar panels silicon slice manufacturers with our spindles to replace imported ones, as well as the domestic wire saw machine manufacturers with batch production of spindles.

河南省机床主轴工程技术研究中心
Machine Spindle Engineering Technology Research Center of Henan Province

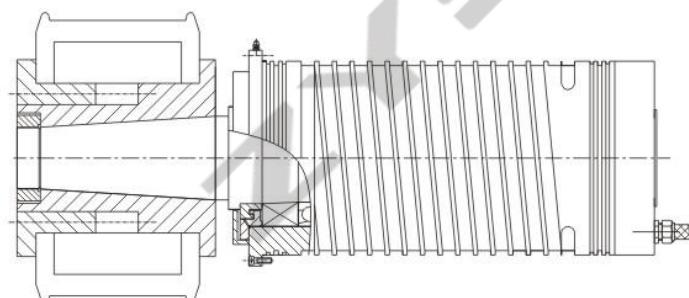

洛阳轴研科技股份有限公司可以为不同行业的客户定制特殊类型和结构的主轴产品，并能提供从产品设计直至主轴装机使用的全过程服务。

We can provide spindle products of special types and structures for different customers, as well as a whole service process from the product design to the spindle fixing and using.

400主轴用于大型金属板带抛光磨削机，功率115kW，最大输出扭矩610Nm

400 Spindles used to large grinding and polishing machines for metal plate and strip, power: 115KW, maximum output torque: 610Nm.

440主轴用于高铁无砟轨道板磨削机床，功率150kW，最大输出扭矩1200Nm

440 Spindles used to grinding machines for unballasted track in high-speed railway, power: 150KW, maximum output torque: 1200Nm.
